

23_cell.py

```
cell = stages[0].__closure__[0]
print(type(cell).__name__, cell.cell_contents)
print(cell is stages[1].__closure__[0] is stages[2].__closure__[0])
```

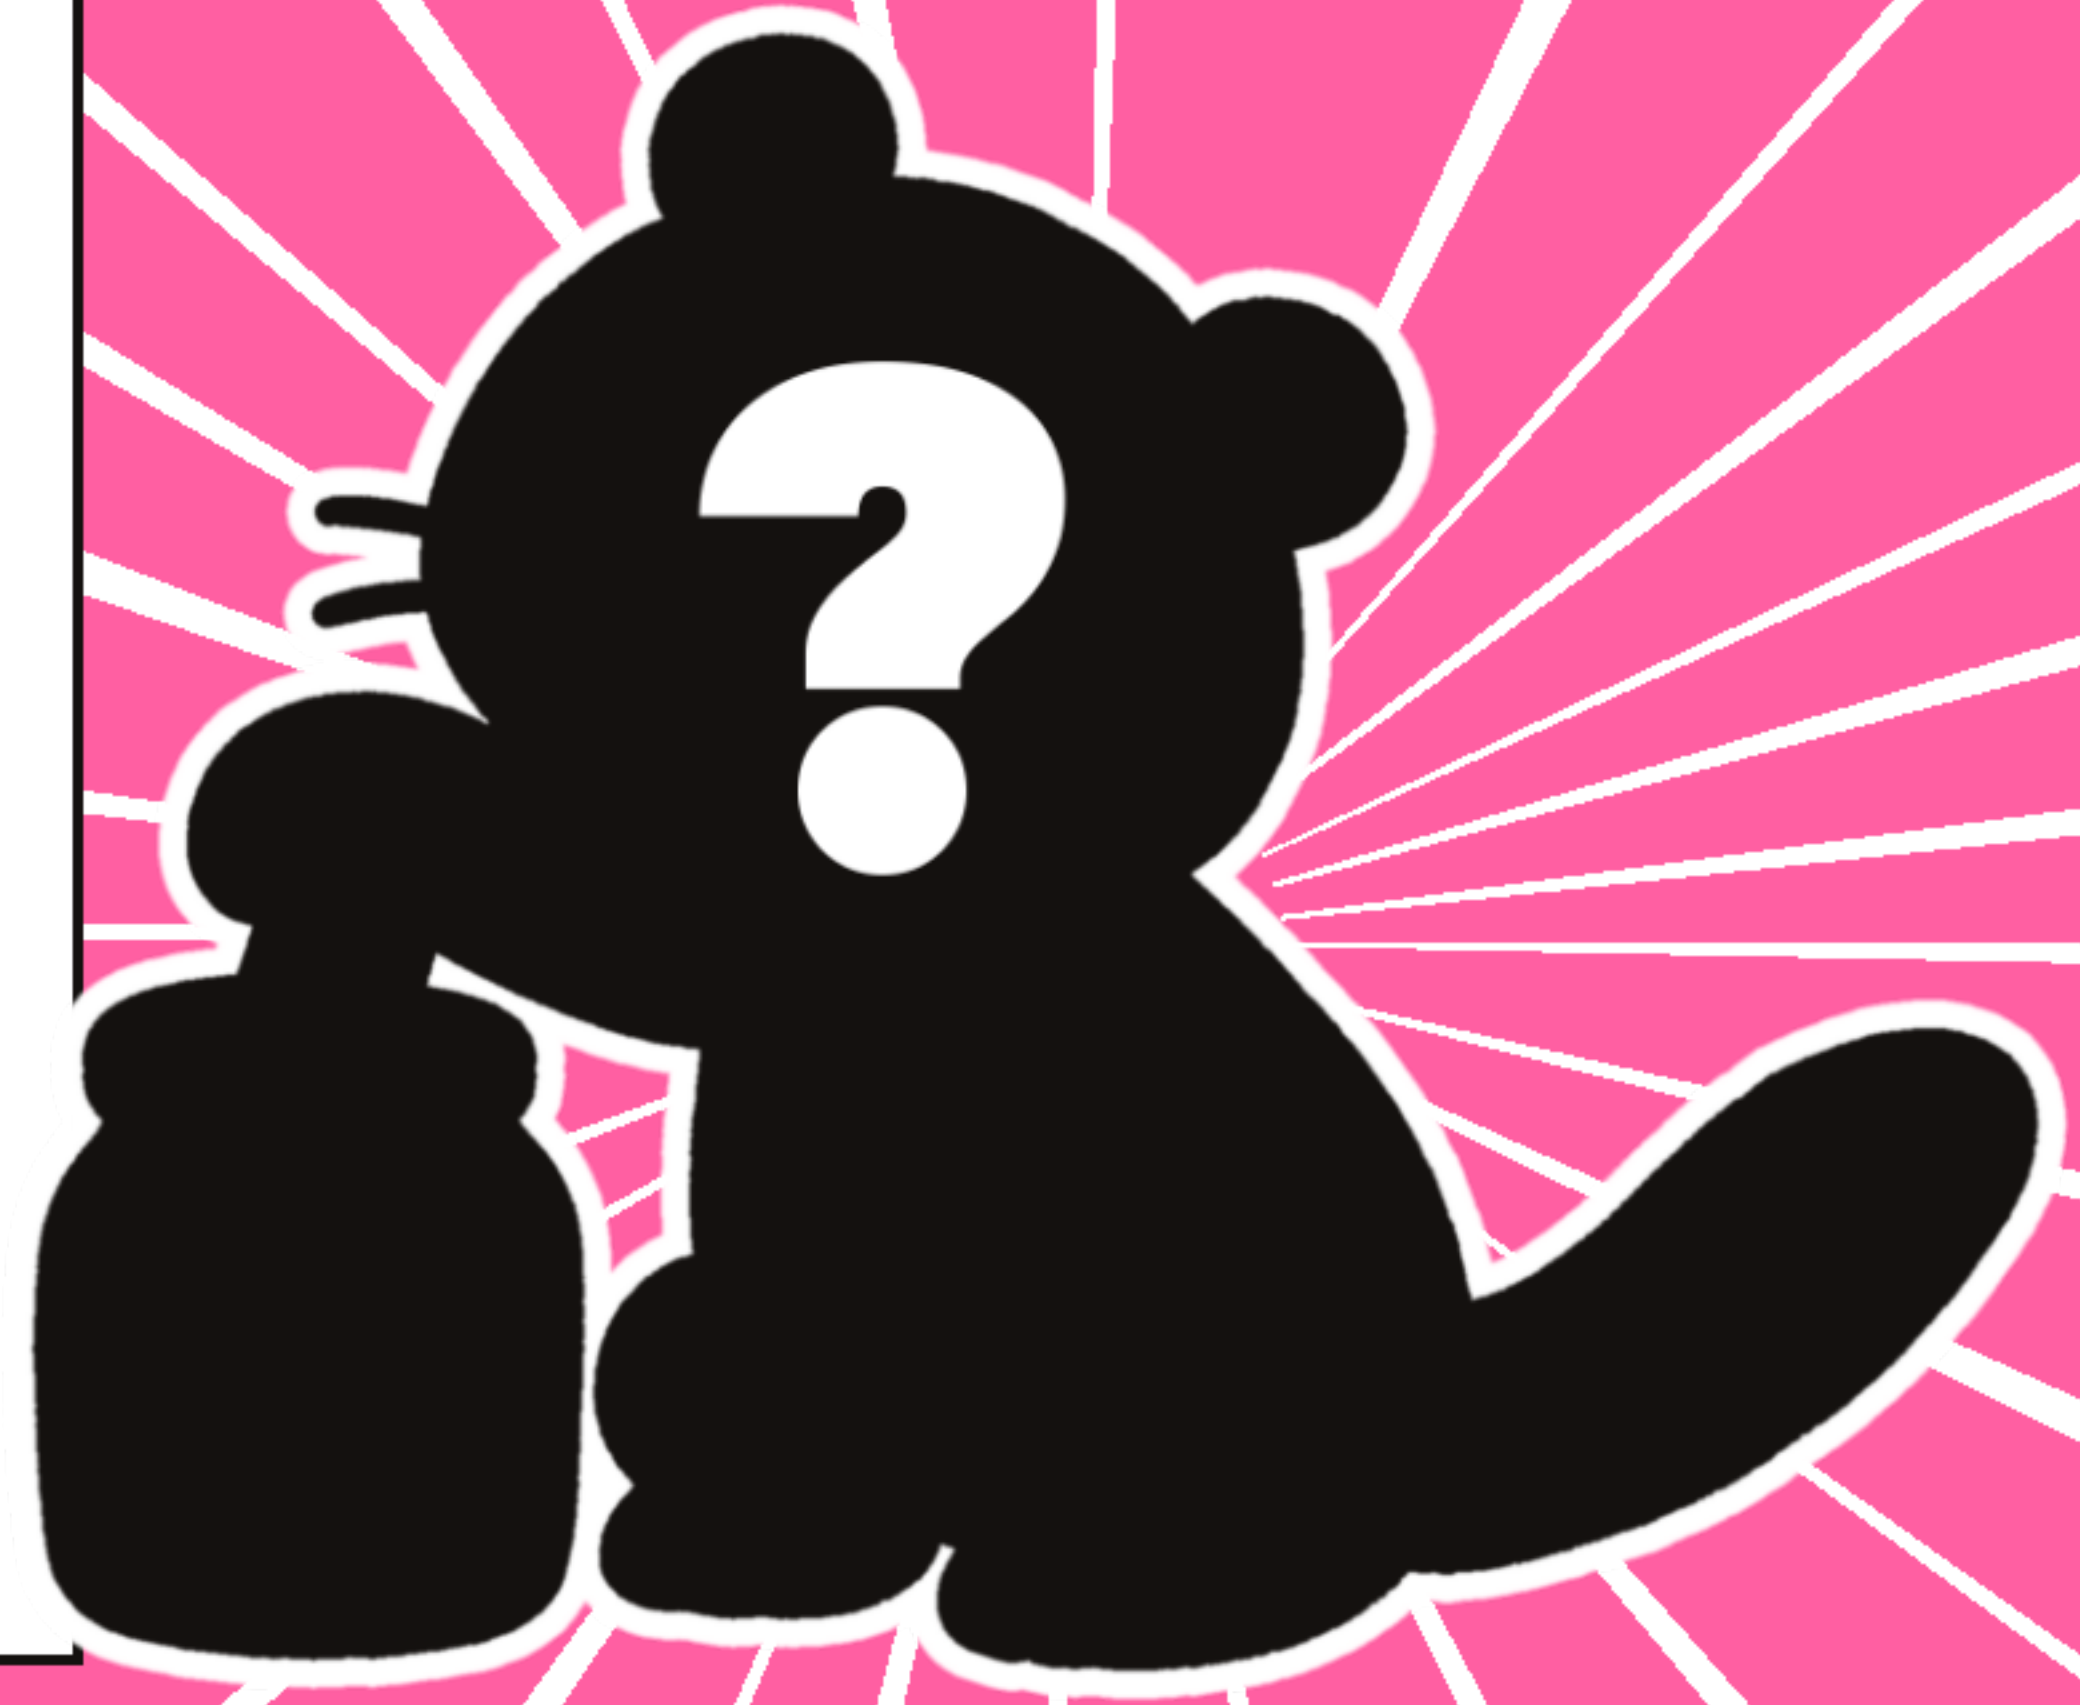

```
cell Pidgeot
True
```

В банке лежит последнее значение s

26_counter.py

```
def pokedex():  
    caught = 0  
    def catch(name):  
        nonlocal caught  
        caught += 1  
        return f"{name}: поймано {caught}"  
    return catch
```

```
catch = pokedex()  
print(catch("Pidgey"))  
print(catch("Rattata"))
```

Что напечатает второй вызов?

A | Rattata: поймано 1**B** | Rattata: поймано 2**C** | UnboundLocalError
