

12_bind.py

```
def attack(pokemon, /, move, *targets, crit=False, **effects):  
    ...  
  
attack("Pikachu", "Thunderbolt", "Onix", "Geodude",  
       crit=True, paralyze=True)
```

Что попадёт в targets, что в effects?

12_bind.py

```
b = inspect.signature(attack).bind(
    "Pikachu", "Thunderbolt", "Onix", "Geodude",
    crit=True, paralyze=True)

for name, value in b.arguments.items():
    print(f"{name:8} = {value!r:22} {type(value).__name__}")
```

```
pokemon    = 'Pikachu'           str
move        = 'Thunderbolt'       str
targets     = ('Onix', 'Geodude') tuple
crit        = True                bool
effects     = {'paralyze': True}   dict
```
