

34_moves.py

```
moves = {"ember": ember, "tackle": tackle}
print(moves["ember"]("Pidgey"))
print(moves["tackle"])
print(type(tackle).__name__)
```

```
Pidgey обожжён
<function tackle at 0x...>
function
```

Функция — значение: лежит в словаре, зовётся по ключу

ВО ВРЕМЯ ВЫЗОВА

docs.python.org/3/reference/datamodel.html#user-defined-functions

35_fainted.py

```
def attack(pokemon, target):  
    if pokemon["hp"] <= 0:  
        return None  
    target["hp"] -= 10  
    return target["hp"]  
  
ash = {"name": "Charmander", "hp": 0}  
foe = {"name": "Pidgey", "hp": 30}  
print(attack(ash, foe), attack(ash, foe), foe["hp"])
```

Чармандер без сил. Что напечатает?
