

08_evolution.py

```
names = ("Pidgey", "Pidgeotto", "Pidgeot")  
stages = [lambda: s for s in names]
```

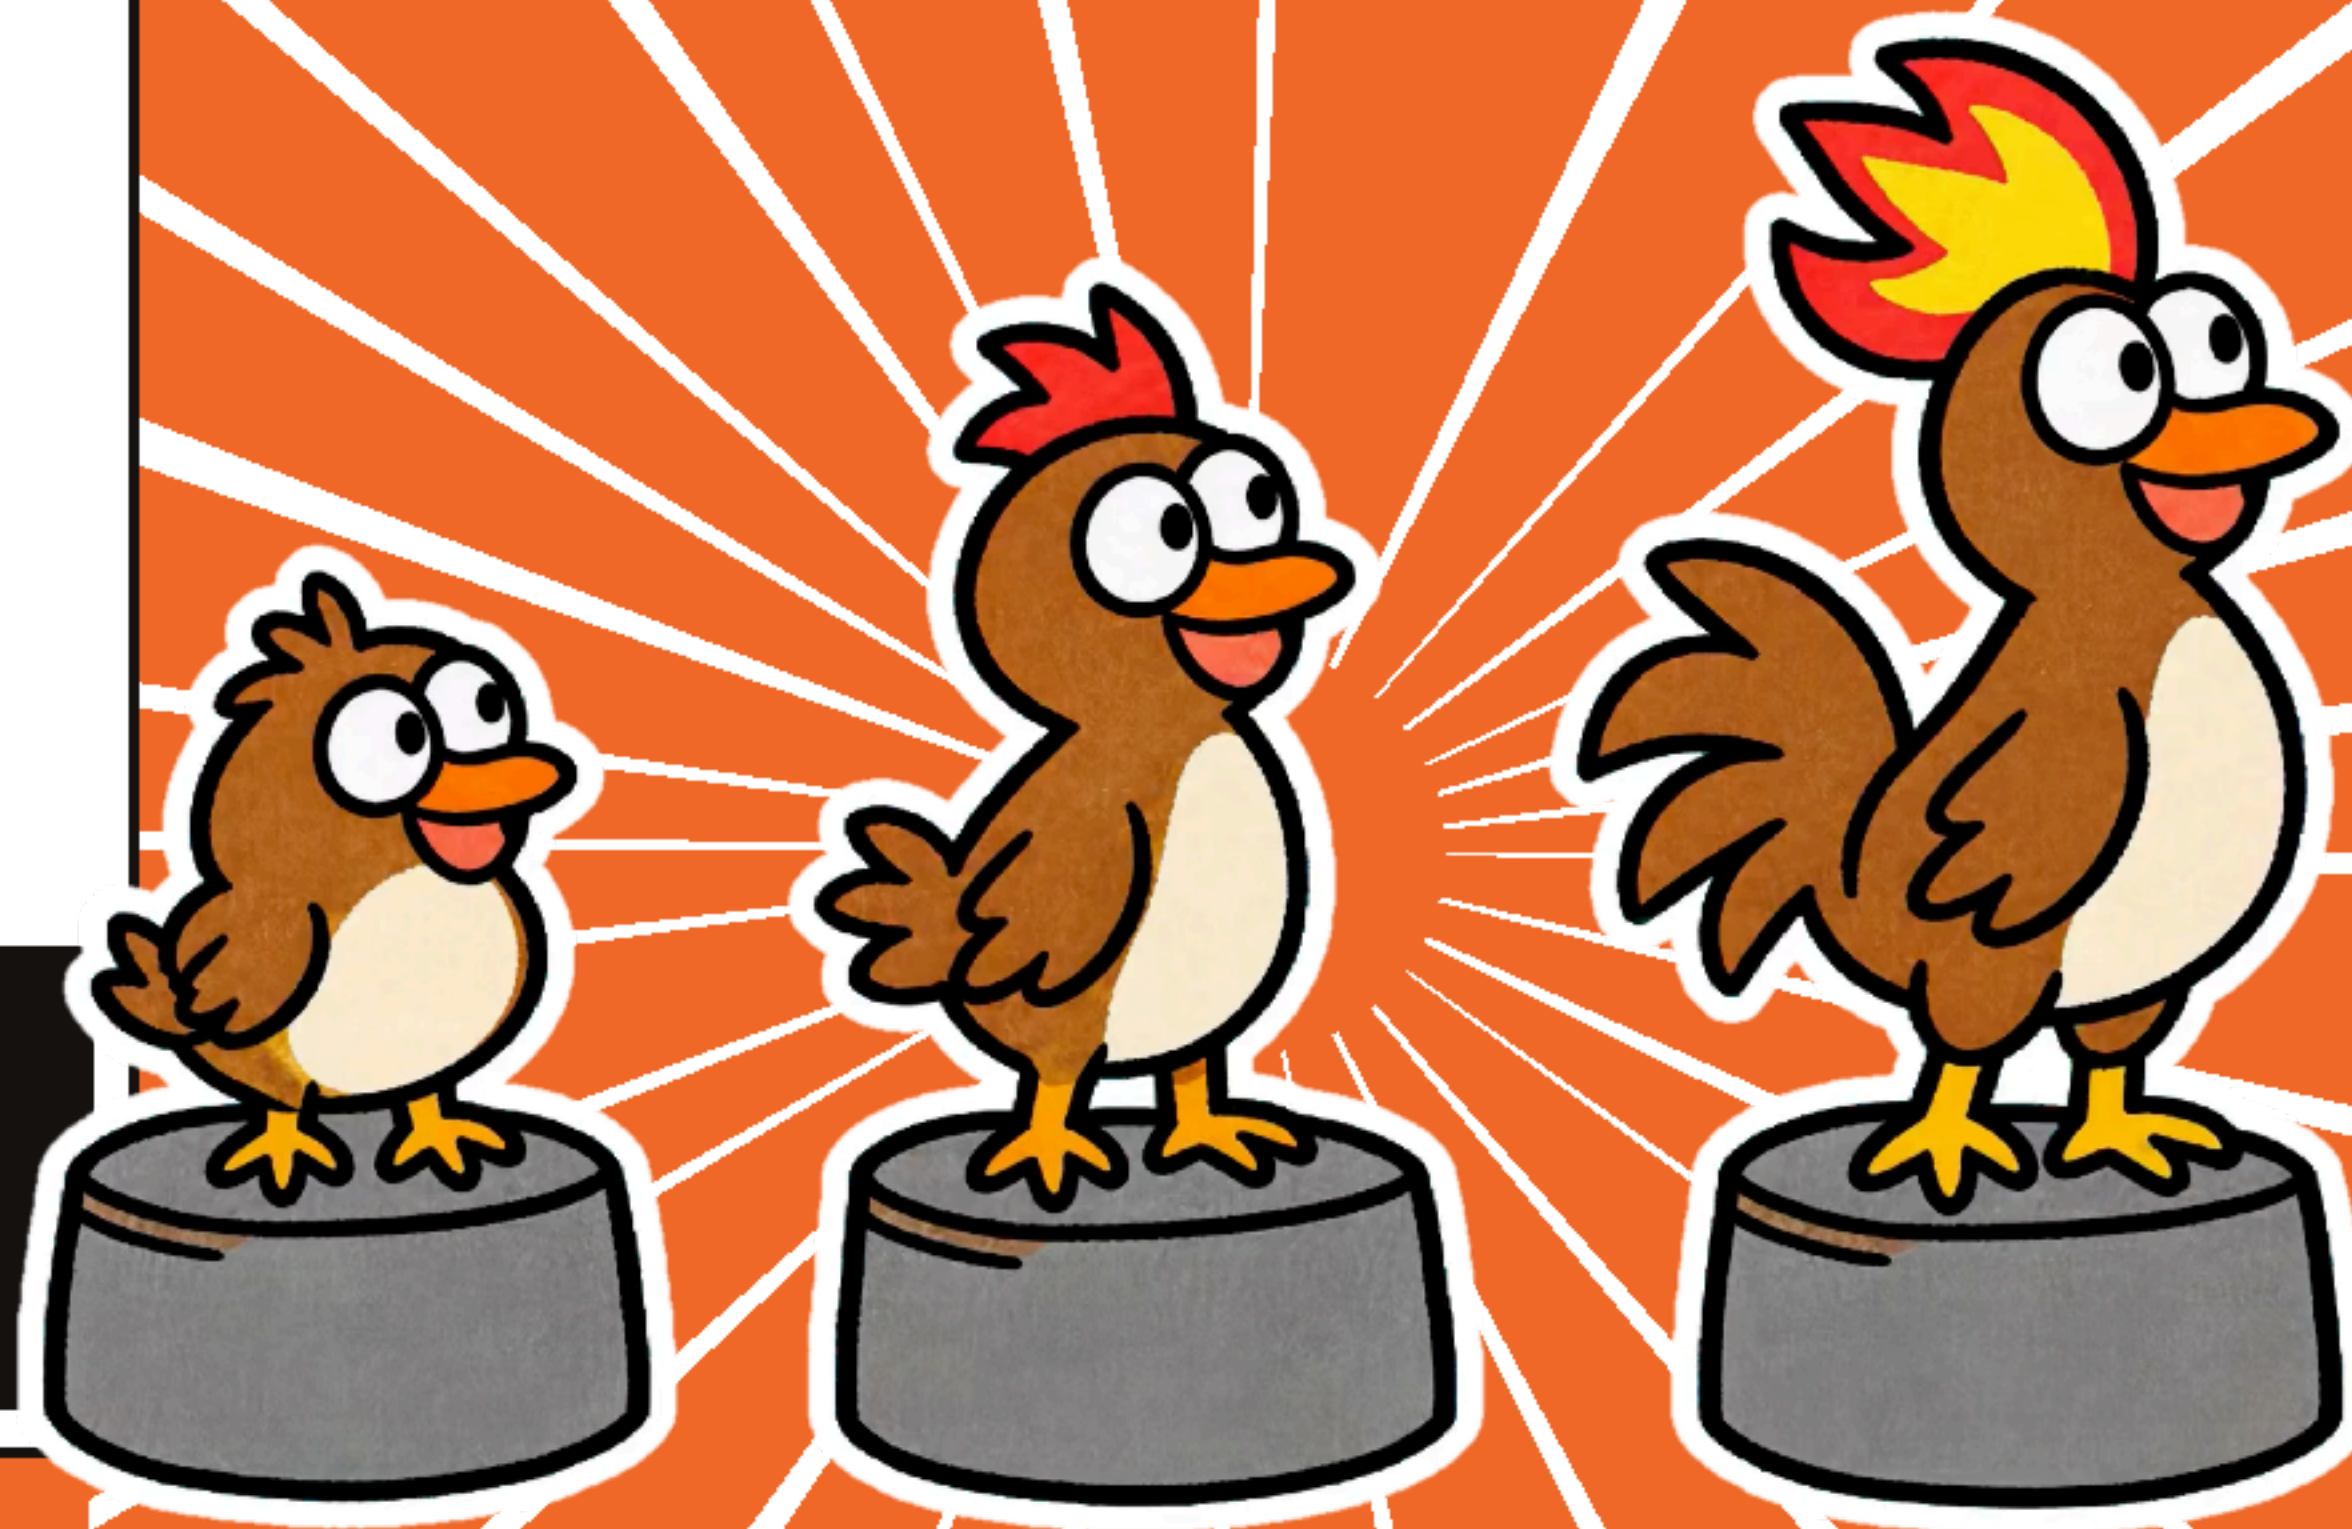

Одна правка чинит еволюцію. Какая?

A | `lambda s: s`**B** | `lambda s=s: s`**C** | `lambda: names`

10_cure.py

```
names = ("Pidgey", "Pidgeotto", "Pidgeot")
stages = [lambda s=s: s for s in names]
print([stage() for stage in stages])
print(stages[2].__defaults__)
print(stages[2].__closure__)
```

```
['Pidgey', 'Pidgeotto', 'Pidgeot']
('Pidgeot',)
None
```

`s=s:` у каждой лямбды своя бирка

В МОМЕНТ def

✎ обведите `s=s`
