

30_heal.py

```
ash = {"name": "Charmander", "hp": 35}
```

```
def heal(pokemon):  
    pokemon["hp"] = 100
```

```
print(heal(ash))  
print(ash)
```

Лечим. Что напечатает первый print?

A | None**B** | 100**C** | {'hp': 100}

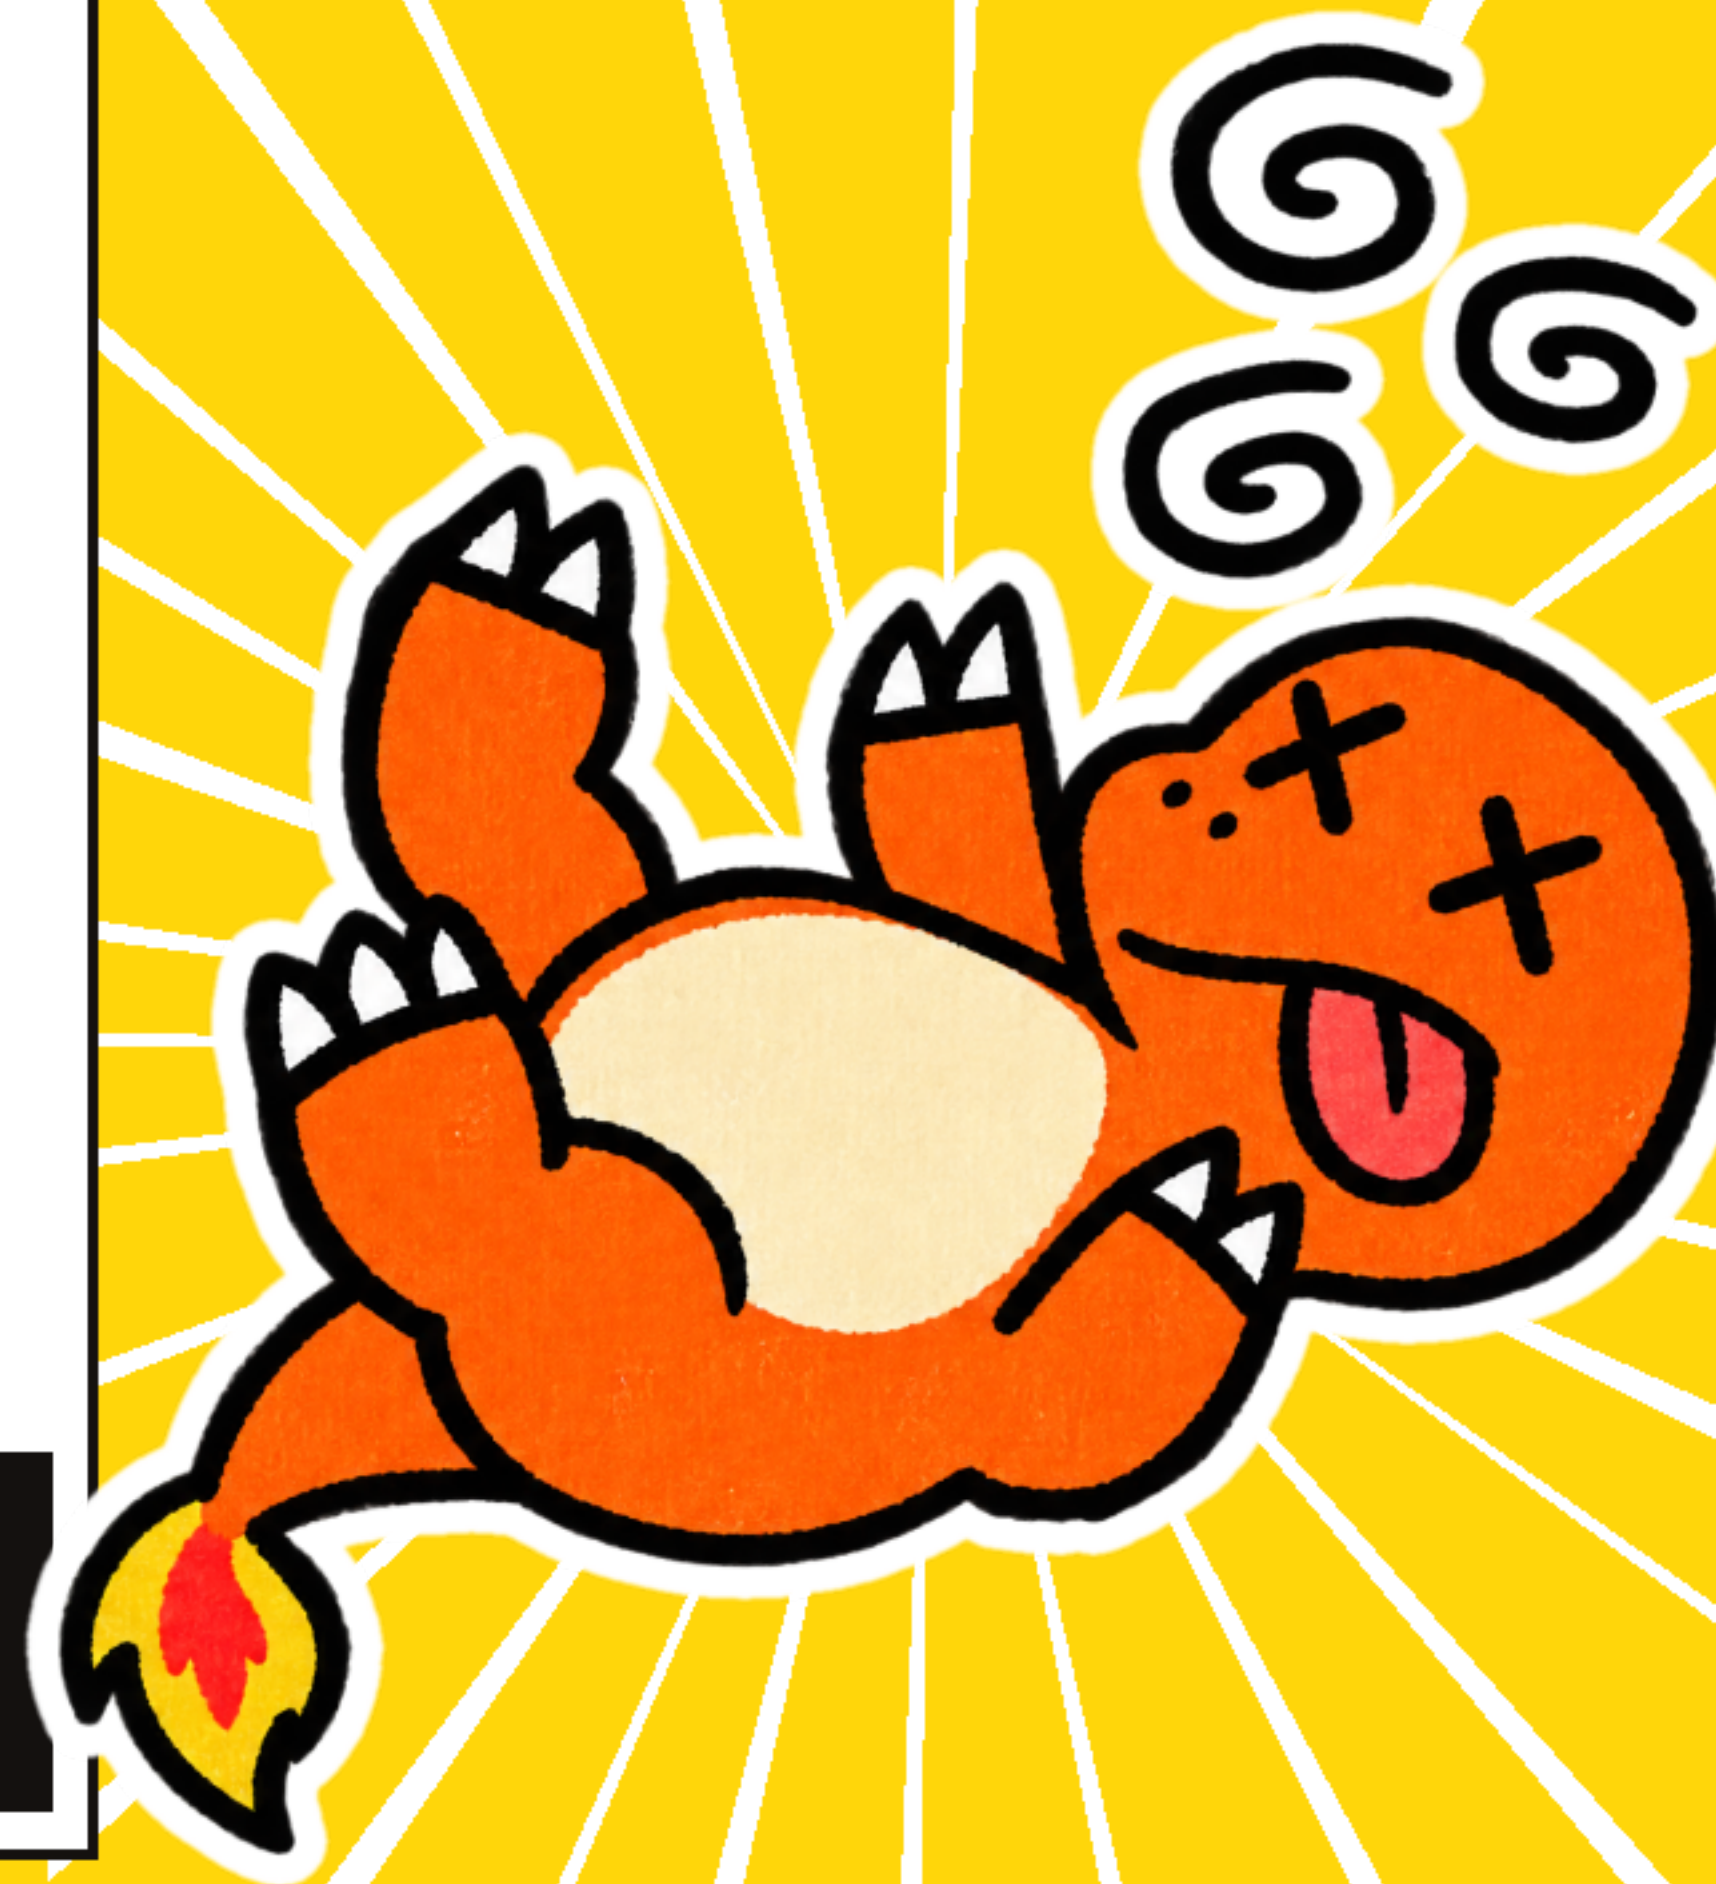

30_heal.py

```
def heal(pokemon):  
    pokemon["hp"] = 100
```

```
print(heal(ash))  
print(ash)
```

None

```
{'name': 'Charmander', 'hp': 100}
```

Нет return — вернётся None
